Clareholm Local News

E. Nelson, of Houston, California, is a patient in the Clareholm hospital.

Miss Mabel Dolphin of Staveley is a patient in the Clareholm hospital since the 26th.

Walter Foulger entered the local hospital on Monday suffering with an infected hand.

A. L. Olmstead is a patient in the local hospital while taking treatment for heart trouble.

Mrs. M. B. Mackay gave a very enjoyable lodge party on Monday evening. Mrs. Crumley won high.

Wm. Thompson, of Granum, was brought in to the hospital here on Friday last, suffering from a broken leg.

The Golf Club is putting on a dance in the L. O. O. F. hall on Thanksgiving night. The Blackbird-orchestra will play.

Miss Clark, of the Clareholm hospital staff, was operated on for appendicitis on Monday. She is reported as getting along nicely.

The weather for the past week has been dry and warm, and favorable for thriving, which has made good progress in this district.

Seventeen of the British boys who will attend School of Agriculture here, arrived on Thursday morning. More are expected on Friday.

Tom Tyler and his pals in "Red Hot Hoofs" at the Rex theater on Friday and Saturday nights this week. Story by George Worthing Yates.

Mrs. Earl Atkinson has returned from Montreal, improved in health. Fortunately, it was not necessary for her to undergo a surgical operation.

Mr. and Mrs. S. B. Chamberlain and son, of Calgary, spent Sunday last at the home of Mr. and Mrs. Elsie Moore. Mr. Chamberlain is manager of the Calgary branch of the Bank of Toronto.

It is expected that Mrs. De Norman, who has been for 25 years a missionary in Japan, will address the W. M. S. of the United church on Friday afternoon, November 4, at their special thank-offering meeting.

Rapid progress has been made during the past week in getting up the frame work of the skating rink. The speed at which it is going ahead leaves no room for doubt that it will be ready for use within the specified time.

A Boston dispatch of the 21st states that "Dutch" Gainer, who played on the Clareholm baseball team the past summer, has been traded to the Boston Bruins National Hockey League club by the Minneapolis club of the Central Hockey League.

The Catholic Women's League, Clareholm Subdivision, are holding an Armistice tea and sale of home cooking on Saturday, November 26th, the place to be announced later. They are also planning on holding a series of bridge drives during the coming season.

We have been informed this week that Mr. and Mrs. J. W. Hallett, of Clareholm, intend taking up temporary residence at the local United church parsonage. Mr. Hallett has kindly consented to take charge of the local church and its mission until the conference meets next June.—Staveley Advertiser.

Clareholm editors were in attendance at the annual convention of the Alberta Press Association, held in the sun parlor of the Palliser hotel, Calgary, last Friday and Saturday. The business sessions were largely taken up with discussion of questions of importance to the newspaper publishers. On Friday evening the visiting editors were entertained at a banquet given by the Calgary Advertiser and on Saturday at a luncheon given by the Toronto Type Foundry Co. and wholesale paper dealers Provincial Paper Sales Limited and Barber-Elkie Limited.

SMALL BOYS EAT PILLS FOR CANDY

Last Sunday afternoon Billy Brooks-Avey and Keith Beattie, two five-year-old boys of this town, found a bottle of pills on the street. As children will, they sampled them, each one eating a number of what seemed to them like little candies.

Mrs. Beattie happening to go out saw her boy staggering. Billy in the meantime had gone home, where he became dizzy and then unconscious. At the earliest moment a doctor was called and the stomach pump used on both the boys. Black coffee was given in an effort to keep them awake as much as possible. They now appear to be little the worse for the experience.

Mr. Brooks-Avey who is manager of the Royal Bank, found the bottle in his son's pocket, with fourteen pills still in it. The doctor pronounced them as liniment, one and one-half grains. Considering the strength of the drug, the marvel is that the lads are still alive. The two boys are cousins. Keith is a son of R. N. Beattie.

FOOTBALLS HOCKEY LEAGUE RE-ORGANIZED

At a meeting held in Clareholm on Wednesday afternoon, attended by delegates from Macleod, Granum and Clareholm, it was decided to proceed to re-organize the Footballs Hockey League and prepare for the coming season. Staveley is still in doubt as to what part they will take, but Pincher Creek has informally applied to be included. The secretary was instructed to write Nanton, Staveley, Pincher Creek and Lethbridge to find out their plans.

Officers for the 1927-28 season were elected as follows: President, Frank Walsh, Macleod; secretary, R. L. King, Clareholm; executive, Clareholm, Roy Marshall; Granum, D. Boyle; Macleod, W. D. Davis. Each team entered will have a member.

Quarantine in Clareholm Like Sherman Said of War

The Review-Advertiser is reliably informed that about 4:30 on Thursday afternoon, water was shut off from the city and sent upon a number of citizens, and had not been turned on up till well along in the forenoon on Friday. Earl Atkinson, who with all his household is under quarantine, was one of those affected. An appeal by Mr. Atkinson over the phone to the Mayor who is superintendent of the town's water department, brought refusal of relief. During this time there was no water for the children to drink or for household purposes, and as members of the household under quarantine regulations to leave the premises their situation was extremely serious. When a quarantined household is subjected to such treatment it appears to be something that needs looking into.

Fire Hazard in Hills Bad at Present Time.

Now comes the time of the year when the big game hunters find themselves for the chase and go forth to the great open spaces to shoot, and perhaps be shot at. It is the time of year that forestry officials find it necessary to issue warnings about fires.

Reports from the foothills are to the effect that the bush country is dangerously dry and the fire hazard is great. There was an exceptionally heavy growth of grass and other undergrowth this summer and it is now dry as tinder.

Foresters ask hunters to be careful with their campfires, also discarded "smokes" and matches.

Mothers:---

Why have the worry and anxiety of baking bread, when you can get Pure, Wholesome Finest Quality, White, Wholehearted, and Raisin Bread at Clareholm Bakery, at 10 cents per loaf.

The Conference Of Premiers

At the invitation of the Dominion Government there will assemble at Ottawa early in November a conference of representatives of the Federal Government and of all the Provincial governments at which considerable will be given to the many questions affecting the interests and rights of the Dominion and its several provinces. This conference will be attended by the Dominion Prime Minister and some of his colleagues and by all nine Provincial Premiers who in each case will be accompanied by cabinet colleagues.

The object of this round table conference is, of course, to discuss problems common to all provinces and to find satisfactory solutions, to adjust any differences now existing, to try and harmonize conflicting laws, eliminate overlapping in administration, and, in general, to study the financial requirements of the several governmental units. In a word, it is a conference for the good of all Canada. Its importance, therefore, does not call for any special emphasis.

This conference of Canadian Premiers is designed to accomplish for Canada something similar to what the recent Imperial Conference at London accomplished for the Empire as a whole. For example, the exact status of the Dominion and its several provinces in regard to certain subjects requires to be clarified. There is now conflict of authority in matters of Company law, incorporation and regulation, including licensing of companies. In insurance matters there is more or less confusion.

Again, some of the provinces are anxious to exercise strict supervision and control over the sale of stocks and bonds of companies, and several Provincial Legislatures enacted what are termed "blue sky" laws for the protection of the investing public, only to find that all companies had to do to escape Provincial jurisdiction was to become incorporated under Dominion law.

Another matter which is causing adverse comment throughout the country is the duplication of police forces, with consequent division of authority, sometimes leading to overlapping and consequent friction; sometimes resulting in lack of cooperation. In any event, people feel there is an unnecessary waste of the taxpayers' money with Dominion, Provincial and Municipal police. The Premier's Conference will give consideration to such problems as these.

Then there is the ever-recurring question of the Dominion subsidies paid to the provinces, and the complications resulting from the fact that some provinces have control of their natural resources while others have not. As an outcome of the Finance Report, the Maritime Provinces have been given a new financial arrangement temporarily. To this the other provinces have not raised any objection, but if a new and permanent arrangement is to be made in the interests of these provinces, then all the provinces have a vital interest in the matter.

Furthermore, it is now fairly well recognized that the financial terms originally fixed at the time of Confederation, and as altered from time to time, work out to the advantage of the Dominion and unfairly to the provinces. That is to say, increased population brings largely increased revenues to the Dominion through Customs, Excise, and other forms of taxation, but to the provinces increased population means enormously increased expenditures for education, roads, hospitals, court houses, and institutions of various kinds, while the small increase in the revenues received from Ottawa because of such larger population is a mere bagatelle compared with such expenditures. Re-arrangement of the financial terms, therefore, becomes a necessity from time to time.

No one thing is more apt to weaken Confederation than the existence of a feeling that it is not working out fairly to the provinces, or that, in regard to those matters which are subject to both Dominion and Provincial jurisdiction, Federal Departments are not displaying that spirit of helpful cooperation which is essential to complete efficiency in Provincial administration. On the other hand, real unity in effort, frank recognition and understanding of each other's problems, and sympathetic consideration and action will make the Dominion united and strong.

The people of Canada will entertain the hope which is that the Ottawa Conference will be as successful in its role as the Imperial Conference was in the larger arena of Empire affairs.

Aviation In Canada

No country provides a better field for air communication than Canada. The distances between the cities are great and the climate is favorable for flying. Experience shows that with suitable equipment, winter presents no insuperable obstacle to the continuous operation of air routes.

Approximately 80 per cent. of the automobiles sold in the United States last year were bought on the deferred payment plan.

Good Country For Aviation

No country provides a better field for air communication than Canada. The distances between the cities are great and the climate is favorable for flying. Experience shows that with suitable equipment, winter presents no insuperable obstacle to the continuous operation of air routes.

The youngest president of the United States was Theodore Roosevelt, who was inaugurated at the age of 42.

Penetrates Far North

University Graduate Prepares For Expedition Into Arctic Circle

Peddling 1,200 miles alone through the regions of Northwest Canada with only Indians, Hudson's Bay Company trappers, and herds of animals to motivate the monotony, Cornelius Osgood, 31-year-old graduate student in anthropology at the University of Chicago, spent the summer steeping himself in the life of the North and learning to live the life of the Indians, preparing himself for a 11-month expedition next year into the Arctic Circle to report on the culture of the little-known Athabasca Indians. Osgood has just returned to the university to continue his studies in ethnology.

One Drop of "Putnam's"

—Corns Stop Aching

Isn't it wonderful—Just a drop or two of Putnam's on any sore and it comes all the pain. After a few applications the corn shrivels up and drops. No more "no pain" rubbing from tight shoes or calluses. Be sure you use only Putnam's Corn Extract. It cures corns or warts in minutes. Buy it from druggists everywhere. Refuse a substitute for Putnam's—it's the best.

Will Bar Italians

Fascist Oath Will Bar Aliens From U.S. Citizenship

Secretary of Labor Davis has reiterated his statement that acceptance of the Fascist oath, as explained in his office, should bar an alien from citizenship in the United States. It is the Fascist oath, requiring double allegiance, in my opinion the man or woman who takes it will not make a good American citizen," the secretary declared.

The question of eligibility of a number of the Italian Fascist Nationalist citizenship cases in that there, where J. R. Thomas, naturalization examiner, is reported as suspending action on 21 Italians, pending investigation of the so-called "bunch" case.

BABY'S OWN TABLETS ALWAYS IN THE HOME

Once a mother has used Baby's Own Tablets for her little ones she always keeps a supply on hand, for the first aid remedy for all the ailments which equal them in keeping children well. The Tablets are a mild but thorough laxative which regulates the bowels and sweetens the stomach, thus driving out the poisons which cause colds and simple fevers, and making the child comfortable. Dr. J. M. Saluste Pelletier, St. Louis, Mo., writes: "I have used Baby's Own Tablets for over 20 years, and have an ever new wonder in the home of the mother who has used them. The greatest satisfaction I can give is that I have used them for so long and they are still the same. The Tablets are sold by medicine dealers or direct by mail at 25 cents a box from The Williams Medicine Co., Brockville, Ont."

America's Oldest Shoemaker

The oldest shoemaker still at the last in the United States is believed to be Daniel Hargrave of Poughkeepsie, New York, who has just celebrated his 84th birthday. Hargrave entered his father's shoe repair shop when he was 12 years old. He inherited the business, and it is calculated that he has handled 10,689 pairs of shoes.

Externally or Internally, It is Good. When applied externally, by being rubbed, Dr. Thomas' Electric Oil opens the pores and penetrates the tissue, touching the seat of the trouble and immediately affording relief. Administered internally, it will still the irritation in the throat which is caused by the growth of the tonsils and the organs of the bronchial tubes and respiration organs. Try it and be convinced.

Antarctic Expedition

Expedition To Extreme Southern Seas Returns To England

After two years of arduous research in the extreme southern seas, Captain Robert F. Scott's old Antarctic ship, Discovery, returned to England, having suffered no casualties in the struggles with the ice fields.

The expedition gathered valuable information, especially about the life habits of whales. Dr. Stanley Kemp, the leading naturalist aboard, told newspapermen that on the disputed matter of the habits of whales, they are not mammals. On the contrary, he declared, they have, so to speak, "a life in every part."

The heaviest snow is known to fall in the form of a cube foot. Snow is a cube second, with from 60 to 85 pounds; however, a cubic foot, ranging from 25 to 72 pounds a cubic foot.

Chest Colds Yield to this Treatment

Isolate Germ Of Infantile Paralysis

Task of Science is Simplified in Attempt To Cope With Disease. A special despatch to the Morning World from Boston, Mass., New York, says:

"The germ of infantile paralysis has been definitely isolated, thus simplifying the task of science in its attempts to overcome the disease." Dr. W. L. Aycock, head of the Harvard Infantile Paralysis Commission, said recently.

"The main problem now is to find suitable animal to yield an anti-toxin."

"The only animal which takes the disease appears to be the monkey," said Dr. Aycock, and the latter's mortality is so high that it is an unsatisfactory subject. When the proper animal for serum purposes is located, infantile paralysis will be controlled."

Dr. Aycock pointed out that a somewhat similar problem confronted science when the diphtheria germ was first isolated and it was found diphtheria serum could be made from the blood of the horse.

"The infantile paralysis germ is immune to being carried over by the most powerful microscopes," Dr. Aycock said, "but its presence was proved by evidence of growth. He found that an infantile paralysis epidemic existed. He pointed out that in Massachusetts there has been a marked increase of cases reported this year as compared to 1916. "Parents need not worry," he said.

"Failures from automobile accidents are far greater than those caused by this disease. Many children who have once had the disease will not have it again."

Girl On the Magazine Cover

Matter is Discussed At a Meeting Held in Toronto.

"They tell us that women are tired of the pretty girl covers but that the men are not," said Mrs. H. M. Allen, in discussing magazines at the Toronto Exhibition.

"They are more cautious than tired," said a woman out in front. "Anyway, you are sure of a decent type of girls on the covers of our Canadian magazines," said the speaker, urging her hearers to patronize the home industries in the way of literature.

It is not always worms to sap the vitality of the little sufferer, but it is often worms that are the cause of the trouble. The little sufferer cannot tell where the worms are, but there are many who can. The mother must be made aware that a dose of Miller's Worm Expeller will get rid of the worms. The mother must be made aware that a dose of Miller's Worm Expeller will get rid of the worms. The mother must be made aware that a dose of Miller's Worm Expeller will get rid of the worms.

Umbrella Makers Benefit

Trade is Boomed By Wet Weather in France.

And all the complaining about poor seasons that has gone on in France this year, one class of men have been singularly prosperous. They are those who make and sell umbrellas. Now, they say, has business been so booming in what is still academically known as summer time.

This year, from a climate standpoint, France had almost no summer at all. May was fine, but May is spring. After that it began to rain—and it kept raining all through June, July and August.

Being unusually in demand, the umbrellas went up in price. Even an unpretentious one cost five dollars or more.

While enduring themselves, the umbrella men kept their sense of humor and gratitude. Their syndicate had printed and distributed 1,200 leaflets containing recipes of General Bismarck, the French weather man.

Losses From Swat. Small disease cases have been known wherever cereal crops are grown. In Canada several estimates of small losses are available only for the last few years, and those show the average annual loss to be Canadian farmers from this source are over \$15,000.

Government departments, agricultural colleges, and technical agriculturists are all engaged in the effort to reduce the loss.

Minard's Liniment for Asthma.

Flight Will Be Hazardous

Commander Byrd's Trip To Antarctica More Dangerous Than Any Yet Attempted

Commander Richard Byrd, who recently flew the Atlantic ocean with passengers, will undertake the most hazardous flight that has ever been made by an airman when he will attempt to reach the South Pole by airplane. He has already crossed the North Pole by air, but the task he has now set out to accomplish entails even greater dangers and difficulties.

For instance, he may find himself obliged to winter in the Antarctic in the event of being caught in the ice. But if all goes well, and as now planned, the flight will have been accomplished and the intrepid voyagers on their way back to civilization early in 1928.

"All goes well" . . . These words are spoken on the lips of Byrd and his companions just now, for well they know, from all the data to hand, that usually all does not so well on that vast but little explored waste, which has been so vividly named "The House of the Blizzard."

The first airplane to fly across this unknown vast wasteland of the earth's surface will be equipped with a powerful wireless and with kite balloons that can be blown high in the air to give greater power, so that in the event of a forced landing or other emergency the fliers will be able to get in touch with the companions left at the base camp at Ross Bay. They will have the means ready to effect Commander Byrd's rescue.

Diarrhoea Summer Complaint HE ALWAYS USES

Mr. T. F. McGregor, McLennan, Alta., writes: "Over four years ago my mother used to give us Dr. Fowler's Extract of Wild Strawberry for diarrhoea and summer complaint. At all times the year since then when troubled with an excessive looseness of the bowels I have been accustomed to take a few doses of the same old, reliable remedy and it always seems to have the desired effect, so I am sure of the cure."

Don't Accept a Substitute. This valuable preparation has been on the market for over 30 years and is only by The T. Millburn Co., Limited, Toronto, Ont.

May Secure Place On Olympic Team

Terence Coach Predicts Saskatoon Girl Would Win in High Jump

That Ethel Catherwood, brilliant high jumper of Saskatoon, will secure a place on the Canadian Olympic team to compete at Amsterdam next year, is the opinion of Walter Knox, one of the best known track and field men in the Dominion. He is now coach of the schoolboys for the Ontario Athletic Commission. Walter claims that Ethel will be a name to remember in the high jump, and that with a little more practice, will be a factor in shortening the distance between the Canadian and the best athlete of Toronto in the fastest female event in the world and that Fanny Rosenfeld is the best all-round girl athlete.

Holloway's Corn Remover makes the corn out by the roots. Try it and prove it.

Fresh water can be dipped from the Atlantic Ocean for a distance of 50 or more miles off the coast of Brazil. This is due to the enormous amount of water that pours from the mouth of the Amazon.

German Embassy Aids British War Veterans

Provides Studio Accommodation Free To London Paving Artist

A pavement artist, whose chief claim to patronage is that he was blown up by a buried German shell at the front in 1917, has been allowed the free use of a basement room in the German Embassy at London as a studio—a proof that the war is really over.

William John Stubbs, the artist, also reduces in the patronage of the German Embassy, and last year in Britain, including Premier Baldwin, Lord Londsdale, Sir William Johnson-Lllyes and William Macdonald.

He has been granted a lease on a country cottage by a high official in the Foreign Office, and last year was treated to a holiday in France by the same benefactor, "which proves," he said with a smile, "that true art never lacks patronage."

Lawyer—"Why did you kill this man?" Prisoner—"The gun went off accidentally. I took him for some one else. It was self-defense. I was crazy! And besides, I didn't kill him!"

"Now that you are married I suppose you will take out an insurance policy?" "Oh no! I don't think she's going to be dangerous!"

The Man With Years, almost lost to him, and his suffering. He sees ahead with years of endless suffering. He sees ahead with years of endless suffering. He sees ahead with years of endless suffering.

He sees ahead with years of endless suffering. He sees ahead with years of endless suffering. He sees ahead with years of endless suffering. He sees ahead with years of endless suffering. He sees ahead with years of endless suffering.

The lifetime of a good watch, as poets say, is 50 years. The balance and hair-spring vibrate 157,000,000 times a year, while an equal number of ticks come from the escapement.

Progress in Agricultural Methods Shown By The Adoption Of Labor-Saving Machinery

The outstanding trait of Western Canadian agriculture is its ceaseless progression. Western Canadian farming never stands still, but is constantly featuring new developments. The diversity of crops extends; methods of operation are improved; the machinery is improved. In particular, the adoption of the mechanical devices and the general utilization of machines to facilitate farming operations and reduce manual effort has been striking. Today, the profession of farming in Western Canada demands not so much physical strength as a practical administrative sense and the working mechanical knowledge. Manual labor requirements are steadily being reduced to a minimum and the Western Canadian farmer is becoming more and more the operator of a machine.

According to report from intelligent observers in Western Canada, the spring revealed two very marked trends in the agricultural industry of that territory, one being the greater powerization of the farm, and the other, the more intensive use of the land. In the latter, the farmer is turning to the use of the tractor and the use of the tractor is turning to the use of the tractor. In the former, the farmer is turning to the use of the tractor and the use of the tractor is turning to the use of the tractor.

Through conditions were tried out in Western Canada as early as 1922, the year 1926 saw the first general practical test of the tractor. In the territory, the tractor is turning to the use of the tractor. In the former, the farmer is turning to the use of the tractor and the use of the tractor is turning to the use of the tractor.

An one of the world's leading agricultural countries, Canada's methods are extensively adopted by the most of important manufacturing industries. In the territory, the tractor is turning to the use of the tractor. In the former, the farmer is turning to the use of the tractor and the use of the tractor is turning to the use of the tractor.

When police at Birmingham, Ala., descended upon a group of negroes closely grouped around a blanket upon which lay many bibles, they thought they were breaking up a dice game. But there were no dice. They searched the men and the room, but found nothing with which gambling might be done. The negroes were thrown out of court when the defense attorney demanded that the dice be produced. Afterward a grinning negro approached the lawyer and said: "Dere, I swallowed them dice. We always take little ones that's easy to swallow."

Saving the Elk. Reports from the Department of the Interior show that the elk, recently almost extinct in Canada, has now increased to about 20,000, through the protective measures framed by the Government. These animals are distributed about as follows: Manitoba, 4,000; Saskatchewan, 4,000; Alberta, 4,000; and British Columbia, 4,000 to 7,000. About 2,000 of these elk are to be found in the national parks.

New Bridge Street, London, was recently panned with a sandstone. After six months of work, it is said to be in almost perfect condition. The street is located in the heart of London's busiest section.

Auto salesmen in the state of Washington are forbidden to refer to the speed of their cars in advertisements. This law has been passed with the hope it would decrease reckless driving.

English Is Common Speech Of Millions

Taught To School Children Of Almost Every Civilized Country
At a recent meeting of the Royal Society of Literature, attended by prominent literary men of Great Britain and the United States, the use and misuse of certain English words and national differences of pronunciation were discussed. One outcome was the decision to take steps to form an "International Council for English." This council would consist of fifty British members and fifty members from the United States. It would investigate disputed usages of words and study "Americanisms and Anglicisms."

The proposal that an international council for English be formed drew direct attention to the spread of the use of that tongue throughout the world. The various dialects of Chinese are spoken, heard, by more people than is English. On the other hand the written language of the Chinese is so difficult to master that learned men in that country have been striving to simplify it. Spanish is the tongue of the greatest population in South America. Russian is the language of about 150,000,000 people. English has been carried by settlers to North America, Australia, and Africa. It has long been the language of a world-wide empire. In 1901, according to a British statistician, English was spoken by only twenty-one millions of people. By 1926 it was the native tongue of one hundred and eleven millions. Today it is the common speech of one hundred and seventy millions. It will be spoken by more and more people as the populations of the British Empire and of the United States increase.

Portuguese, it is being taught to children in the schools of almost every civilized country in the world. It is growing more an more into use as an international language.

Winnipeg Newspaper Union
The Boss: "Is it true that you leave your typewriter and go when the clock strikes five, even if you are in the middle of a word?"
The Steno: "Certainly not. I never get up near five as I never begin a word at all."

Free church seats might be appreciated now if they were less uncomfortable.
Jokes on marriage are funny only to those who are not married.

A Frok Of Youthful Charm
Of girlish simplicity is the child frock shown here. In View A the scalloped skirt is attractively embroidered, and is adorned at the top to the bodice having a centre front closure, a V neck, long darted sleeves, and scalloped cuffs and collar. View B shows the same frock with the sleeves and collar omitted, and having a close fit of ribbed cuffs at the wrists. View C and wide lace in place of the scalloped cuffs. View D is a pattern for a dress, and View E is a pattern for a dress.

Developing New Grain

"Myself Wheat" Ripens Fortnight Earlier and Yields Equals Marquis
In his first statement on his "myself wheat" which is developing on his farm near Visually, Alberta, Herman Trede, world wheat and oats king, reveals the new grain is being developed for harvesting by combine.

These are features of myself wheat. The new stands still even under light snow; the head does not shatter; it retains the kernels in a last crop, even under adverse weather conditions.

The grain ripens a fortnight earlier, enabling it to stand in the field until about ripe, without damage from frosts, thus providing ideal grain for simultaneous cutting and threshing. The yield and quality equals that of the Marquis variety.

Trede is still developing the new wheat but hopes by the end of next season to have it tested officially so that farmers all over the West may start growing it.

Progressive Canadian Eskimos
Rapidly Adopting the Ways of the White Man
Canadian Eskimos are progressive people. The more advanced have, in their homes, sewing machines, gramophones and radio outfits. They are keenly interested in the Arctic code the ambition of the head of the Eskimo police in South America, with an auxiliary gasoline engine, and the high price of Arctic furs has enabled a good many to attain this objective. At Aklatia, a trading village, mission station, and police post on one of the islands of the delta, as many as twenty-five of these Eskimos, all owned by natives are frequently to be seen at one time.

Prairie Provinces Are Making More Butter
Account For About Thirty Per Cent of Canada's Output
Every one of the provinces records an increase in butter production last year. Manitoba having the largest increase. The increase, a striking feature of the survey, in fact, is the position in butter production which the Prairie Provinces have come to occupy. In the provinces, Alberta, Saskatchewan and Manitoba, taken comparatively, while still ago did not produce enough for their own requirements, now rank third, fourth and fifth respectively, and together produce nearly 20 per cent. of the Dominion butter output.

Given Enthusiastic Reception

Traffic halted When American Legion Delegates Marched In London
The journey of London gave a wild and enthusiastic reception to a delegation of nearly 3,000 American Legion members from New York who marched through the streets creating a big traffic problem.

The Americans, in bright uniforms and bearing flags "roll in" in the Great Scotland Yard, while a crowd which had followed them from their hotels became more dense each minute, holding up the Whitehall traffic. Then the visitors, marched to the campsite in an impressive column, made resplendent by red, white, and blue ribbons, British and American flags, and the marchers' bright costumes. A drum major of impetuous proportions and gorgeous in scarlet, blue and gold, led the legion band. A woman's contingent headed the marchers, bearing twelve American flags.

After placing a wreath on the cenotaph, the American veterans, who had the tomb of the unknown soldier in Westminster Abbey.

Sacrifice Of Human Life
Safety Measures Necessary To Lessen Number Of Automobile Fatalities
It was freely admitted at the opening session of the 14th annual convention of the Good Roads Association of Canada at Niagara Falls, Ontario, that in the past few years there had been an appalling increase in the sacrifice of human life due to the automobile, and in this mind Mr. George S. Henry, Ontario minister of highways, appealed to the gathering to make "safety first" the keynote of the convention.

It is Carpenter, deputy minister of highways in the province of Saskatchewan, stressing the fact that development of roads had followed that of the province generally, said there were now some 7,300 miles of road in Saskatchewan supplying some 400 market points, as compared with 1,000 in the neighboring provinces.

Saskatchewan Wheat
Fattening
Saskatchewan produces more wheat than all the other provinces of Canada combined, enough to feed 30,000,000 people, and is exporting twenty-nine millions of the production, said President Gardner of this province, addressing the Pacific Foreign Trade Council in Victoria, B.C. The wheat production of the whole world was 300,000,000 tons, 80,000,000 tons of which was for export. Of this latter figure Canada produced 7,000,000 tons, of which 5,000,000 is under the control of the wheat pool of Western Canada.

Prospective Buyer—"How does the land lie out here?"
Seller—"It isn't the land, it's the agents."

American Legionnaires to France
Sixty members of the "Boys of '76" Bugle and Drum Corps of Post 76, Racine, Wisconsin, part of the American Legion, who sailed from Quebec recently to attend the national convention in Paris. Attired in white uniforms and steel helmets, and accompanied by brilliantly garbed drum majors, they presented a very handsome spectacle as they embarked to embark on the Canadian Pacific steamship Montserrat for Antwerp.

This corps is a part of what was considered the most stupendous transatlantic peace-time movement in

Five Fields Left To Conquer As Out-of-the-Way Parts Of The Earth Are Mapped By Explorers

Only three-quarters of a century ago large tracts of the earth were unexplored. The unknown, the whole interior of the African continent, was a blank on the map and in the opinion of many, probably, a projection of the sandy wastes of Sahara.

Both Polar regions were unexplored, little or nothing had been ascertained regarding the regions of equatorial Asia. America and the central parts of Asia and Australia. In 1912 geographical authorities were able to say that the unknown no longer existed and that the world had attained almost complete self-knowledge. That qualifying word, "almost" doubtless applied to the unexplored portion of the Polar regions.

Even the interior of Brazil, beginning with the first great exploratory journey of David Livingstone in 1823-54, continental interiors on the unknown have retained the blank areas on the map until few fields are left for the adventurous to conquer.

Of all that remains, the most provocative is the equatorial rain forest, a huge continent that surrounds the South Pole, with an area only a little less than that of the United States. Rising to an elevation of two miles above the sea with "barrier bulges" of snow, the ice cliffs and snowward "guardians" of the continent are so high that the only way to surmount them by airplane is easy, but then comes dangers of another kind. The terrain has been called by one explorer, who spoke of the fullness of personal experience, as "Zulu-land," the home of the "Zulus," where the equatorial rain forest is 100 degrees below zero. These 100 degrees exacted their toll of death when a Canadian expedition, led by the other three survivors of its ill-fated Polar expedition perished in the winter of 1912, from exposure and starvation.

Commander Byrd's proposed flight to the South Pole and back, now planned for the autumn of next year, will be the most difficult and perilous of all Polar ventures, and the most dangerous. It is in view of that more thorough understanding of the continent, the North Pole. But the greater the hardship and peril of the quest, the stronger is its appeal. It is a matter of adventures temper and the urge will remain vital. It is satisfied. In the case of the Antarctic, it is brightened by the report of vague mineral possibilities. This will naturally attract the prospector, as it has done in the Arctic. In the meantime, the Antarctic holds the attraction always attendant to mystery.

English Insects Recured
New Zealand Has Appeared For Aid To Control Weevil Menace
An expeditionary force of entomologists will be sent soon from England to New Zealand. The Dominion has appealed for aid against the country and blackberry brambles and raspberry which has spread too rapidly. At the experimental station at Winton, New Zealand, entomologists of British beetles and caterpillars are undergoing elimination tests to determine which have the most voracious appetites for weeds and in their diet.

When the insect "sneak troops" are picked they will be rushed to New Zealand and trained house against the farmers' enemies.

Winning Steers Loose In Penna
To determine the relative merits of feeding steers for winter feeding, large to large pens or tied in the stable a test has been conducted during the winter of 1927. In the Lancaster, Pa., Experiment Station. The results of the test show quite conclusively that large gains were obtained at a cheaper cost by feeding the steers loose in pens. Especially when the cost of labor and equipment is taken into consideration there is a marked advantage in wintering steers in this way.

Sockeye Salmon In B.C. Scores
"I saw and heard of loss Sockeye in the spawning areas of the Fraser River," said a fisherman here last year that in all of the preceding 25 years in which I have hunted for them, I have never seen such a large crop."

Profit In Sheep

Sheep Raising As A Side Line On The Prairie
Although the farmers of the prairie provinces will probably continue indefinitely to depend upon their growing as their main source of income there are several lines of work which fit in admirably with grain growing and provide an extra source of revenue. One of the best of these sidelines for the prairie, according to E. Van Nieu of the Scott, Saskatchewan, Experimental Station, is sheep raising. Many farmers are realizing this and the number sheep in the prairie provinces is increasing. They prove particularly helpful to the farmer when the main crop is found wanting on account of seasonable conditions. The two sources of revenue from sheep, namely wool and lambs have raised the proposition doubly attractive.

Sheep are useful as a channel for converting low grade wheat grain and poor pasture into valuable food. They are capable of a varied range, grower and in districts where alfalfa or clover is not available they should be kept on roughage for the breeding stock in conjunction with straw, but good results have been attained at least when straw was the only roughage fed. Probably the most satisfactory method of setting a start with sheep is to acquire a few grade ewes and use pure-bred rams. If the farmer has had no experience with sheep he should start with a small number.

Vegetables and Meat
No Proof That One Is Better Food Than the Other
Speaking of longevity and its causes recalls the fact that recently in the United States in Ontario two farm boys—young men—are a most interesting case. One of the boys, a vegetarian, agreed to stake their contentions upon a ten-day fast. The vegetarian was the one, but by so small a margin that the meat eater's victory hardly counted. He lost his contestations that he could gain stamina while vegetable diet did not. Both runners finished in the condition, so that it would seem as if one man's vegetable was his meat as well. The point of the whole matter, so far as those who have trouble with their stomachs are concerned, is that if one likes vegetables he should eat them and lots of them, whereas if he likes meat and finds that his stomach is not strong he should eat meat as well. The point of the whole matter, so far as those who have trouble with their stomachs are concerned, is that if one likes vegetables he should eat them and lots of them, whereas if he likes meat and finds that his stomach is not strong he should eat meat as well.

Honey Competition
At Agricultural Fair
First Time Classes In This Product Have Been Arranged
Beekeeping has been an important industry in Ontario for many years, but since the war it has made immense progress. Recognition of the importance of honey production as a national industry is being given this year by the Ontario Agricultural Fair at Toronto, where for the first time competitive classes in honey have been arranged. At the "Bogal" in past years there have been displays of honey, but no competitions. All individual exhibitors must be from the 1927 year of the exhibitor's own apiculture. If exhibited by an association or province, must be produced by an apiculture. The honey produced in 1927. In order to ensure that the displays will reflect the utmost credit on the beekeeping industry, the judges will have to take into consideration any factors that are not attractively presented, without considering the quality of the honey.

Canadian honey has already won an enviable reputation overseas, the Ontario entries having taken top places at the Imperial Baity show in London for several successive years.

Watch 100 Years Old
Miss Cynthia A. Platter, White Lake, N.W., has had her grandfather's watch, now for the first time in 100 years. The watch, which was made in London in 1771, belonged to Peter Platter, and becoming out of order, was taken to a watchmaker in London. It is estimated that well over 15,000 Legionnaires sailed from America to attend the convention.

An Asset Of Importance

Government Geologist Of New South Wales, Britain's Newest Colony, Coal Output Will Increase

As the centre of Canadian population moves westward, the demands upon the coal fields of Alberta and Saskatchewan will increase, observed Dr. E. C. Andrews, government geologist of New South Wales, while in Saskatchewan recently as one of the party of 225 of the Empire Mining and Metallurgical Congress.

Impressed with the great success of the congress, Dr. Andrews said he was pleased to see the tremendous coal industry and the vast resources within the Empire, of which about one-seventh of the world's known supply was in the Alberta field.

The coal fields of Alberta have immense possibilities," he said, with the observation that the difficulties of transport, and the great distance to the eastern centres of population were delaying the full development of the pits.

All practical miners in the party had been much interested by the methods used to mine coal from the bituminous fields.

The rock tunnel isolated panel system with 200 feet of each panel a great protection against fire, he said. To the ordinary citizen that system of mining would mean little but the saving methods prevented thousands of tons of coal and cost miners from danger.

The methods of mining in the Columbia area, and the great distance of at least one mile in New South Wales, he said.

The large slopes at Sullivan, the concentrator plant and smelter at Trail, B.C., and the zinc plants and marketing industries had all been of great interest to him, said Dr. Andrews.

"The Dominion has developed marvelously in the 20 years since I came here last. The growth of the West has been miraculous. The school systems, the technical facilities and the institutions of higher learning are all a monument to the men and women who are building Canada."

"Of course, you realize that we are anxious to see trade with Canada developed. We are more than anxious to see trade develop between the various parts of the Empire."

The Wise Business Man

Does Not Give Up Unless He Has Something Else To Interest Him
Business men will read with amusement and advantage the story of Dr. E. C. Andrews, the broker, who sold his seat on the New York Stock Exchange for \$194,000, intending to retire, and less than three months later bought it back at an added cost of \$24,000.

He was probably very wise. Many a business man goes into a decline when he gives up his business and feels he has nothing in the world to really interest him. It is interest and enthusiasm in life that keep us young, and even keep us alive after mid-age.

Be sure, before you retire, that you have accumulated outside interests that can keep up your post-retirement life.

Apples In Canada

Apples are Canada's leading commercial product in fruit. Since 1838 when seed was imported from Britain, on the Baltic Sea, continuous efforts have been made to originate new and better varieties of apples for Canada. In a recent report of the Horticultural Division of the Dominion Experimental Farms descriptions of eighteen new varieties named during 1925 are supplied.

A Near Retort

She had very red hair, and a ruddy glow about the ear, clamped at her one or twice, tilted, and then edged away to the far corner. "Excuse me, miss," he said grinning. "I didn't put too close to you, or I might get burned, you know."

But she was a little bit and quite equal to the occasion.

"Don't worry," she replied, "you're much too green to burn!"

Nespeled Mountain

Nespeled Mountain, on the International boundary between British Columbia and Alaska, is 8,165 feet high. It was named after Count Charles de Nespeled, Minister of Foreign Affairs in the Russian Government and plenipotentiary in the negotiations between Russia and the United States regarding the Alaska Boundary—Geographic Board of Canada.

Only an expert shopper can visit supermarket stores in one afternoon and escape without spending a cent.

W. N. E. 1701

Utilizing Power From Sleeping Volcanoes

Italy Now Using Steam Energy For Industrial Purposes

To engineers it has long seemed a gross waste that the tremendous energy of volcanoes should not be harnessed to do work.

Already means have been found whereby steam from subterranean sources can be utilized for industrial purposes, says the *Forbes* Independent. In Italy electricity derived from volcanic heat is sent over wires to Florence, Leghorn, Pistoia, and other cities and towns for light and power.

In Bolivia the government has granted a concession for the use of steam from Mount Taqsi, in the Sud Lipes district, near the Chilean frontier. The volcano is to be made to drive turbine engines which are expected to electricity all the Bolivian railroads.

Wells are bored usually to a depth of about four hundred feet, and are lined with iron tubes eight to sixteen inches in diameter. At the mouth of the pulley holes, both natural and artificial, the pressure of steam causes a high velocity of water to rise from the depths to the surface through coils of pipe.

The water, which has been going on for more than a year near the crater of Kilaua, on the island of Hawaii, but the rock is basalt and gives off a great deal of heat, which has not penetrated very far. It is said that the scheme in that locality probably will be successful. But the Hawaiian Government is working on a plan, seemingly practicable, for making bricks of molten lava from the Kilaua crater. It is proposed to extend a trolley across the crater, carrying an endless chain of buckets, which would scoop up the liquid lava, carry it to the rim of the hole, and pour it into molds.

Papers One Cannot Buy

Scotland Yard Has Publication Only

If your newspaper agent boasts that he can obtain any paper you desire, order a copy of "Hush and Cry," and he will have to admit himself beaten. This paper is published by Scotland Yard, and although it is the daily connecting link between Scotland Yard and every town and district in the Kingdom, only police officers and high officials see it.

It contains "private and confidential" information concerning men and women who are wanted but have vanished from their former haunts, vivid word sketches of missing persons, and many precious items that notorious crooks would give much to know.

"Hush and Cry" is by no means the only daily newspaper that the general public never sees. The British railway companies issue a daily journal for the benefit of interested members of their staff. This is not a credit record, but it does help to check losses of stock, for it records articles the railway have on hand. One issue of this paper reported that the railways had on their premises crocodiles, bears, beetles, tadpoles, a collection of fish, serpents, and ancient human remains.

Have Curative Qualities

Almost All Fruits and Vegetables Make Excellent Remedies
Most vegetables and fruits have curative qualities. Spinach has a direct effect upon the kidneys, and onions, garlic, leeks and shallots possess medicinal qualities which have a marked effect upon the circulatory system.

A raw onion eaten before going to bed is an excellent remedy for insomnia, whilst soup made from onions has a soothing and restorative effect upon the digestive system. The lettuce and the cucumber cool the system. Peas and turnips are excellent appetizers, and celery has an admirable effect upon the nervous system that it has been known to cure neurasthenia and is of great use in rheumatic cases.

Tomatoes are good for the liver, figs, currants, cherries and strawberries, are rich in iron. Spinach, eaten first thing in the morning, an orange will cure dyspepsia.

Dominion's Nickel Production

The nickel production of Canada constitutes 55 per cent. of the world's supply. This is derived from the Sudbury district, Ontario, supplemented to a slight extent by the nickel recovered as a by-product from the treatment of the silver-nickel chloride ore of the Cobalt area.

Catgut, known to its name, does not come from cats, but is prepared from the intestines of sheep.

Increase In Livestock

Number Of Horses, Cattle, and Sheep Shows Increases In Prairie Provinces

While Manitoba had 625 horses per farm in 1924, as against 643 per farm in 1913, Saskatchewan in the period has increased her number from 524 to 831, and Alberta from 672 to 937. This would indicate that the increase in other mechanical power is by no means outstripping the horse in farm operation. In the period cattle per farm have increased in Manitoba from 9.88 to 11.43; in Saskatchewan from 6.67 to 5.79; and in Alberta from 12.21 to 15.01. Manitoba, which had 36 sheep per farm in 1911, had in 1924, 212; Saskatchewan increased its figure from 120 per farm to 137; and Alberta from 211 to 437. This latter is due to the addition of large range herds as well as the more general adoption of sheep on the small farm. In the 15 years Manitoba increased its swine per farm from 1.32 to 5.67; Saskatchewan from 2.01 to 5.71; and Alberta from 3.52 to 5.93.

Demand For Farms

Sale Of Five Farms Is Reported By Development Company

Indicating an increasing demand for private lands in Manitoba, the Canada Colonization Association of Colonization and Development of the Canadian Pacific Railway, has just completed the sale of five farms aggregating 38,000 acres. Locations and prices: 400 acres at Oakdale, Sask., \$19,000; 320 acres at McCauley, Sask., \$13,000; 490 acres at Hawarden, Sask., \$25,000; 360 acres at Provost, Alberta, \$55,000.

Forest Tree Seeds

The Forest Service of Canada has four plants for the extraction of forest seeds from the cones or envelopes. These are located at Indian Head and Prince Albert, Saskatchewan; Vancouver, British Columbia; and Rocky Mountain House, Alberta. The cones of these plants in the fiscal year 1925 made up about 2,260 pounds of cleaned seed. A large proportion of the seed was shipped to Great Britain to be used by the Forestry Commission in its reforestation work.

A man's reflection never dies so long as he uses the golden rule in measuring his actions.

Pleads For Unity

Need About Everything, Else Says Sir Arthur Currie

Just as unity was necessary during the war so it was needed about everything else in times of peace, declared Sir Arthur Currie, former commander of the Canadian corps in France, at a dinner in Montreal of the Royal 22nd Regiment.

Canada, Sir Arthur continued, has three great lessons to teach the world. First, it was the only country of its size that had won political autonomy without a war or a revolution of any kind, the only country in the world that had not had to fight a battle for its independence. Second, it centred two great races with countries of war behind them, who lived in peace and harmony and with the ideal—to make Canada a happy and prosperous land for a happy and prosperous people. Third, it had lived for 100 years at peace with one of the greatest nations of the world.

The Dominion, he believed, should play a great part in the development of peace.

The Value Of Courtesy

Nothing Else As Good For Business Or Making Friends

Courtesy costs nothing, but it is the greatest selling proposition in the world.

Courtesy recalls the customer and creates a new one; discourages buyers who are not ready to buy, and gives those you have and keep away.

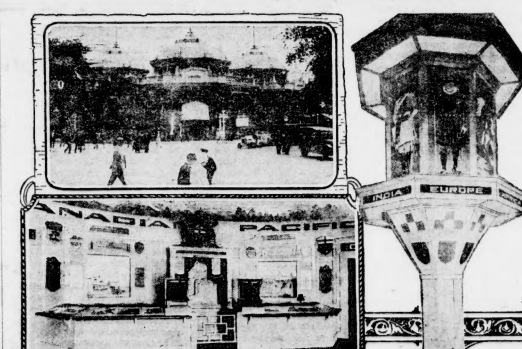

Wisdom is always courteous; discourtesy is the mark of stupidity.

Discourtesy is no mark of superiority. The real aristocrat is the most courteous to those whom fate has placed in lower walks of life than those he trods, thus we have a paradox which is a great truth—a real democrat is the only real aristocrat. We all like money, but there is not one of us that does not know there are things more precious than money.

One's self-respect is one of them. The discourteous man insults the self-respect of others and makes enemies of them while he is making a fool of himself.

What could exasperate a man more than hitting a pole with his new car and getting the fender all new?

Handsome Canadian Pacific Exhibits

(1) The Railway Building of the Towns Exhibition. (2) A portion of the Canadian Pacific Exhibit.

Throwing the spotlight on all its recent activities, the Canadian Pacific Railway has again achieved success in its exhibit this year at the annual exhibition at Toronto. It is the only exhibit of the kind for the first time in the history of the railway. The beautiful castle of mystery in the heart of the mountains, the great railway of the country we live in. Tiny automobiles, the road winding paths, trail horses start off their necks, and the Stoney Indian with his square seat outside their repose helped to make the setting realistic.

The company's latest achievement in hotel construction was displayed in a model of the new hotel at Regina, Regina. Covered wagons in the foreground tell the story of man's progress since the first days when wagons were the only means of crossing the prairie.

Special permission was given to the Canadian Pacific to erect a model of the new hotel at Regina, which when completed will be the largest hotel building in the world. Much interest is being displayed by the public in this new structure which will rise 28 stories

Not Becoming Lost Art

Plenty Of Work To Keep Blacksmiths Busy

If the clink of the hammer under the chisel never disappeared from the land, the primary cause will be the vanishing of the chestnut tree and not of the village smithy. The smithy man still is to be doing twenty-four million automobiles.

Blacksmiths representing 75,000 master horsemen and blacksmiths recently held a convention in Jersey City. In New York City alone there are 25,000 horses to keep hammer and anvil from becoming a lost art. On the farms in the census year 1920, there were 19,747,000 horses. This was a decline of only 62,000 from the census of 1914, but the decrease in value is given at \$200,000,000. A fall of 15 per cent. in value for the average farm horse would be explained by the automobile, which has displaced the horse and made the horse a thing of the past.

Nevertheless, it is admitted by a spokesman for the master horsemen that their survival is conditioned upon compromise. The village blacksmith has taken on automobile repairing as a sideline. It is not stated how this compares with the main occupation. The main figure is that there were 22,000 blacksmiths in the census of 1914, but there were only 15,000. The decline in the number of woman blacksmiths was catastrophic. It fell from 21 to 4. By this time the village blacksmiths must be a memory—New York World.

Eik For British Columbia
The Department of the Interior at Ottawa has granted the application of the province of British Columbia for a license to be used in restricting areas between the Okanagan and Kettle Valley. Twenty-five animals from the village of Hafford, British Columbia, were shipped to Coonhen, B.C., and released. The Walworth herd numbers approximately 100 animals.

In the Polytechnic Institute of Zurich, Switzerland, a clock which does not need to be wound, its running power is provided by a mechanical act in motion each time there is a change in temperature of two degrees.

Crate Feeding Of Poultry

Instructions As To Best Methods To Be Used

No poultry intended for eating should be marketed without being fed. The easiest way to do this is by crate feeding, and details of instructions for making the crates are given in a bulletin on Preparing Poultry for Market, available at the Publications Branch of the Department of Agriculture at Ottawa. The crates most commonly used are made of corrugated iron, wire and blacklead, or some of their by-products, but whatever is used should be finely ground. Whole grain should never be given. Corn produces a yellow fat, therefore it is advisable to use it in ration where white skin is in demand. An excellent mixture consists of equal parts of corn, oats and blacklead.

In crate feeding the use of sour milk is indispensable where high quality is an object. The birds are not only fed with milk, but with milk, but can take more of it, and can stand heavy food for a longer time when it is used. The milk is mixed with water in a 1 to 1 ratio. In about the proportion of three pounds of milk to two of grain. This mixture is fed in a trough. This, and any food that is fed should be renewed daily, so as to keep the appetite keen. It is customary to mix a mash feed before it is fed, which may begin before it is fed. Cockerels especially should be fed a mash feed before marketing. It also pays to finish the pullets and hens with a mash feed. They are only fed to eat. Two weeks may be used to crate feed, but cockerels may be fed for three or even four weeks to advantage.

A Lasting Friendship

Difference Of Opinion Does Not Affect Canada-U.S. Relations

It was a happy coincidence that took the Foreign Secretary, Mr. Baldwin to America just after the failure of Geneva and brought about the signing of the Bridge Treaty with the Vice-President of the United States. It is a poor friendship between other nations or individuals that cannot tolerate any difference of opinion; rather it is the sign of true friendship when it can reconcile, can live with each other. Geneva, but our differences are not like those that divide Europe, and if neighboring States in Europe managed their relations with anything like the success of Canada and the United States, there would be no problem of disarmament to solve. —London Saturday Review.

Not All Imagination

In Last Century Hans Andersen Wrote Of Algonquin Flight

Hans Andersen showed a remarkable prescience of the flight of the Algonquians. In one of his stories, "In Years to Come," written in the sixties of the last century, he wrote of a fairy tale with the following passage:

"The ship came. It is crowded with passengers, for the journey is quicker than by sea. The submarine electric-motor-propelled ship has already telegraphed the number of the passengers. Already Europe is in sight. It is the Irish Coast that lies beneath the water. The passengers sleep on; they do not know they are waked until they are exactly over Europe."

Needed Scientific Name

"Honor, if there is anything the matter with me, don't friction me. I am a doctor, and I know the scientific name. Just tell me what it is in plain English."

"Well sir, to be frank you are lazy."

"Thank you, doctor. Now tell me the scientific name for it. I've not to report to the nurse."

Canadian Ice Cream For Bermudians
As a last device to attract tourists, a West Indies tourist, ice cream is being shipped from Halifax to British Columbia, in liquid form and refrozen at its destination. On the other hand, ice cream shipped to Bermuda is shipped in blocks and kept solid throughout the journey.

"As you see this medicine is good for both or neither."

"I'm a doctor, I believe that is the right combination to help my husband."

ALBERTA CROP REPORT

(Issued by the Department of
Agriculture, Government of Al-
berta.)

Edmonton, Oct. 21.—Threshing has again been general during the past week of excellent weather throughout the province, according to information received by the Department of Agriculture. Sun and wind have largely remedied the effects of the rains and a good deal of the grain now being threshed is grading "straight." It is estimated that by the end of the present week 35 to 40 per cent of the season's crop will have been threshed and three to four weeks of favorable weather should see threshing completed. Some 6,500 machines are being operated in the province with an average total output of over eight million bushels.

Reports from a number of points indicate that threshing returns are exceeding earlier grainer predictions as to yield, and the majority of recently threshed wheat is grading No. 2 or No. 3. Good progress is being made with the threshing of oats and barley and very little damage is apparent as a result of weathering. Fully 50 per cent of threshing is completed in the Peace River, Grande Prairie and Spirit River districts and a high average yield is reported over large areas in this part of the province.

Elevators generally have had no difficulty in handling the run of grain. A slight shortage of farm labor is reported from a number of points, especially in the south of the province. This factor has delayed sugar beet harvesting to some extent. The yield of sugar beets is estimated at fully a ton per acre heavier than last year's crop, and the sugar content of the beets shows a decided increase.

Pastures have held out well during the fall months and livestock is in good condition, with an ample supply of feed available for the coming winter.

Good progress is being made with fall plowing in fields cleared of stooks, and following the rains of the past few weeks, the soil will enter the winter in a promising condition as regards moisture for next season's crop.

MARVELOUS VALUE

It is really marvellous the wealth of good, wholesome, constructive reading matter in each issue of The Family Herald and Weekly Star of Montreal. It is a wonderful combination of three great papers: a weekly newspaper covering the news of the world, with the greatest news-gathering organization in existence; a family magazine of interest to every member of the family, old and young; and an agricultural journal that is worth, alone, many times the price of the paper. Just imagine a combination containing all the above features in a big 72 page paper, and all for the price of the average country weekly—one dollar a week. The Family Herald and Weekly Star is a credit to the newspaper business of Canada, and well deserves the support of all Canadians. It is said to have over a million readers each week.

Another PRICE Suggestion Maple Nut Cake and Chocolate Layer

THIS unusual, economi-
cal Maple Nut Cake
will keep fresh for several
days, and the Chocolate
Layer Cake, made in a lit-
tle different way with Dr.
Price's Cream Baking Pow-
der, is a family favorite too.
Try one or both of them
today!

(All measurements for all
materials are level.)

MAPLE NUT CAKE

1 cup shortening
1 cup light brown sugar
2 eggs
1 cup milk
1 cup flour
1 teaspoon salt
2 teaspoons Dr. Price's
Baking Powder
1 cup chopped nuts—preferably
pecans
1 teaspoon vanilla extract

Cream shortening, add sugar slowly and mix of eggs and milk and beat well, add flour, salt and bak-
ing powder together and add
chopped nuts; fold in beaten
eggs and flour. Bake in
moderate oven 35 to 45 minutes.
Cover top with maple icing and
sprinkle with chopped nuts while
still soft.

MAPLE ICING

1/2 teaspoon butter
1/2 tablespoon hot milk

1 1/2 cups confectioner's sugar
1/2 teaspoon Dr. Price's Baking
Powder
1/2 teaspoon maple flavoring

Add butter to hot milk; add sugar
slowly to make paste of the right
consistency to spread; add flavor-
ing and baking powder and spread
on top and sides of cake.

CHOCOLATE LAYER CAKE

1 cup shortening
1 cup sugar
1 egg
1 cup milk
1 1/2 cups flour
4 teaspoons Dr. Price's
Baking Powder
1 teaspoon salt
1 teaspoon vanilla extract

Cream shortening; add sugar gradu-
ally, beating well; add beaten
egg one-half the milk and mix well;
add one-half the flour which has
been sifted with salt and baking
powder; add remainder of milk,
then remainder of flour and flavor-
ing. Beat after each addition.
Bake in greased layer cake tin in
moderate oven 35 to 45 minutes.
Put together with

CHOCOLATE FILLING AND ICING

8 cups confectioner's sugar
1/2 cup boiling water
1 teaspoon vanilla extract
2 squares unsweetened chocolate
1/2 cup milk
1/2 teaspoon ground orange peel

To sugar add boiling water very
slowly to make a smooth paste;
add vanilla, melted chocolate and
orange peel. Spread between
layers and on top of cake.

Made from Cream of Tartar, derived
from grapes. Raises the dough per-
fectly, giving the food fine texture
and rich flavor.
